🌐 Rohit Kumar

## PROFESSIONAL SUMMARY

Detail-oriented Data Science & AI enthusiast with hands-on experience in Machine Learning, Data Analysis, Time Series Forecasting, and AI automation. Skilled in Python, LangChain, large language models, and building end-to-end AI-powered tools and agents. Eager to contribute enthusiasm, adaptability, and a builder mindset to dynamic teams.

## EDUCATION

### IILM University

Bachelor of Technology – Computer Science Engineering **GPA: 7.3**

2022 – 2026

### Nalanda College

12th (Senior Secondary)

## SKILLS

**Technical Skills:** Python, SQL, Pandas, NumPy, MongoDB

**Machine Learning / AI:** Generative AI, Prompt Engineering, LangChain, RAG, LLMs (GPT, Claude, Gemini)

**AI Automation:** n8n, Zapier, WhatsApp Business API

**Tools & Platforms:** GitHub, Streamlit, Pinecone, Power BI

## EXPERIENCE

### Python & Data Science Intern

March 2025 – Jul 2025

*Vaishnav Technologies*

- Developed and evaluated ML models for classification and regression using Scikit-learn, Pandas, and NumPy.
- Performed data cleaning and preprocessing — missing values, feature selection, and data transformation.
- Created data visualizations and dashboards to support data-driven decision making.
- Applied exploratory data analysis (EDA) to identify patterns and trends in datasets.
- Improved model performance through feature engineering and optimization techniques.

## PROJECTS

### AI Customer Support Chatbot with WhatsApp Integration

- Built an AI chatbot using Python and LLMs (GPT, Claude, Gemini) to handle FAQs and product queries automatically.
- Integrated with WhatsApp Business API to respond to customer messages in real time.
- Used LangChain for conversation memory so the bot retains context across multi-turn chat sessions.
- Created an n8n workflow to route unresolved queries to a human agent, reducing manual response time.
- Stored product FAQs in Pinecone vector store enabling semantic search using RAG and Prompt Engineering.

### Electricity Consumption Forecasting using Prophet

- Developed a time series forecasting model using Facebook Prophet to predict electricity consumption.
- Performed data cleaning, EDA, and feature engineering using Python, Pandas, and NumPy.
- Evaluated model performance using MAE and RMSE metrics, enabling data-driven decision making.

### Stock Market Prediction and Visualization using LSTM

- Built a deep learning LSTM model (TensorFlow/Keras) to predict stock prices from historical data.
- Performed data preprocessing, feature engineering, and EDA using Python and Pandas.
- Developed an interactive Streamlit dashboard for visualization of predictions and trends.

## CERTIFICATIONS & ACHIEVEMENTS

Python Programming — Let's Upgrade

Jul 2024

Java Programming Fundamentals — Springboard

Nov 2023

Secured 1st Rank in Science Olympiad (School Level) — strong analytical and problem-solving skills
